

DESKTOP TRANSFORMATION SERVICES

A SOLUTION OFFERING FOR
CORPORATE & ENTERPRISE

Are you looking to transform your desktop environment? With our PMI (project management institute) aligned desktop transformation rollout services, you can ensure your organisation gets it right first time.

Desktop transformation is the transformation of user and computer-centric desktop items into a centralized environment that allows dynamic, independent and secure access to all applications, data and printers.

Desktop transformation addresses continuous evolution of desktop infrastructure as a result of requests for cost savings, new functionality, increased usage and performance. Such changes can have a significant impact on how end users work.

Auxilion has a proven track record in desktop transformation and project management. Whatever the requirements, we can offer a comprehensive approach for seamless migration to new desktop environments.

A successful desktop transformation entails the gradual transformation of user and computer-centric items into a centralised environment that allows dynamic, independent secure access to all applications, data and printers – without the need to change desktop and application delivery infrastructures, application versions or operating systems.

Key Benefits

- Alignment of IT with strategic business needs
- Reduction in total cost of ownership (TCO)
- Reduction in cost of licensing for unused or
- Under-utilised applications
- Reduction in maintenance costs
- Improved flexibility via centralised desktop
- management and virtualisation
- Allows migration to new operating systems
- and adoption of new applications
- Provides opportunities for rationalisation
- Improved security and data protection
- Improved service management
- Increased storage and scalability via cloud

Typical Challenges

Get desktop transformation wrong and the entire organisation could grind to a halt and flood IT support desks with calls. Common challenges include not investing sufficient time to effectively plan the desktop transformation, not having a clear application strategy, insufficient application testing and under-estimating the importance of the discovery / audit phases.
